

The \$2.1M Revenue Risk: Spending Retention Dollars Blind

\$2.1M
Annual Revenue at Risk

Industry Benchmark:
1.5% / month

Our Postpaid Churn:
36.2% / year

🔍 The Problem

We are losing one in three postpaid customers. Without knowing exactly who is leaving or why, our current retention campaigns are untargeted and financially inefficient.

🎯 The Objective

Deploy an intelligence layer that identifies flight-risk customers, explains their specific grievances, and triggers the exact offer needed to save them.

The Intelligence Layer: Prioritising Explainability Over Accuracy

Diagnostic matrix table

Dimension	Traditional Black Box AI	Our TreeSHAP Approach
Prediction Type	Probability score only	Root-cause weighted factors
CMO Trust	Low	High
Actionability	Blanket offers	Targeted, segment-specific interventions

"Anti-Black Box" Risk profile breakdown

The Build: Live Intelligence in Action

Commitment = Retention

Data shows Month-to-Month customers are 2x more likely to leave.

Play: 15–20% discount for switching to a 1-year contract

Loyalty Preservation

High tenure, high revenue, but fading engagement.

Play: Personal senior account manager call + exclusive rate lock

Churner Personas ∞

Price-Sensitive Shoppers

174 customers

34% of churners

Avg revenue: \$66/mo

► 15–20% discount for 1-year contract upgrade

Frustrated Early Adopters

151 customers

29% of churners

Avg revenue: \$71/mo

► Proactive support outreach + free security tier

Quietly Disengaging Veterans

109 customers

21% of churners

Avg revenue: \$72/mo

► Personal account call + exclusive loyalty plan

At-Risk Budget Customers

82 customers

16% of churners

Avg revenue: \$70/mo

► Flexible payment plan or bill credit

The 4-Call Cliff

Support calls are a step-function risk. 4 calls = 51% churn.

Play: Proactive tech support call + free 6-month security tier

Financial Bridging

Late payments and low overall charges.

Play: Flexible payment plan or one-time bill credit.

Targeting 'Persuadables' for Maximum Campaign ROI
